

Hi Susana Fragoso Pato,

Thank you for all of your hard work so far I hope you are enjoying the course.

The assessment of your HTML, CSS & JS project has just been completed.

The links you submitted were:

- <https://github.com/Susafp/Allergens-Quiz-Milestone-two>
- <https://susafp.github.io/Allergens-Quiz-Milestone-two/>

The breakdown of your marks for each assessment criterion (graded from 0 to 5) are as follows:

<b>Usability and Real-world application</b>		<b>Layout and Visual Impact</b>		<b>Code Quality</b>		<b>Software Development practices</b>	
Criterion	Score	Criterion	Score	Criterion	Score	Criterion	Score
Project Purpose	5	Responsive Design	5	Appropriate use of HTML	5	Directory Structure and File Naming	5
UX design	5	Image Presentation	5	Appropriate use of CSS	5	Version Control	5

Usability and Real-world application		Layout and Visual Impact		Code Quality		Software Development practices	
Criterion	Score	Criterion	Score	Criterion	Score	Criterion	Score
Suitability for purpose	5	Colour scheme and typography	5	Appropriate use of JavaScript	5	Readme file	5
Navigation	5					Comments	5
Ease of Use	5					Deployment implementation	5
Information Architecture	5					Deployment write-up	5

You have also received the following textual feedback from the assessor:

**Usability and Real-world application:**

The project's purpose is defined in the documentation but the user goals are what is needed as actual stories. The aim of the project is to create an online quiz which is user-friendly and also has an instruction page with appropriate use of JS functionality. The application as at when reviewed and tested works as intended and fulfils all project purpose and brief. The UX Design is simple and easy to use. The user can navigate from one question to the other, view past or previously selected questions, and

be able to reset the test. The system is user friendly and does not have any difficult or complex issues for the users to navigate or learn. It is very user intuitive.

### **Layout and Visual Impact**

The website design is mobile responsive and user-friendly. It is fully responsive as tested on the screen resolutions of iPhone 6/7/8 and iPad. The images are well displayed and are of the right height and width for this project. The colour scheme is uniform and makes use of three colours through the entire project. The font is of adequate size and weight, which has made it easy to read and make use of the content in the platform.

### **Code Quality**

The student made appropriate use of HTML syntax and tags. The student made appropriate use of JavaScript coding techniques such as writing in ES6. CSS styles are declared in a separate stylesheet and imported into the relevant HTML file(s), with classes and id selectors using the preferred naming convention. The code looks well organised and easy to navigate.

### **Application Features:**

The application is built on HTML, CSS and JavaScript. The features of the applications works very well and I found that the quiz when not selected, prompts the user to select an answer which is commended.

### **Software Development practices:**

The directory is well structured, and the files are properly kept in their right folder. The files are named properly for each of identification and the right structure. The code is well documented and it is easier to actually understand what the developer was trying to achieve in some of the functions and lines of code. The deployment process is well-written and documented, making it easier to understand and know how to deploy this project on local. The directory is well structured, and the files are properly kept in their right folder. The files are named properly for each of identification and the right structure. The project is well documented and very easy to grasp how to make use of the project through the description and instruction page.

### **Overall feedback:**

The overall project is of fine quality and the features works as intended. The application also meets the project's requirements which is highly commended.

I hope the feedback makes sense but I am more than happy to talk through the above.

Best regards

Scott Nnaghor
